About Us

A Data-Led Partner Across the Full Lifecycle of UK Living

Ringley Group is an established market leader in operational property and the professional services that support asset owners. Una Living is the Group's living sectors delivery platform, encompassing a diversified portfolio across student housing, co-living, multi-family blocks, single-family rental homes, and later-living accommodation.

As a vertically integrated, data-led business, we use our proprietary techstack to mine and benchmark performance, making us uniquely positioned as both advisor and operator. This dual role means no one is closer to the data that drives performance across the entire development lifecycle. Our expertise informs every critical stage:

- Design & Build Strategy
- Operational & Capital Expenditure (OpEx & CapEx)
- Amenity & Mobilisation Strategy
- Lease-Up & Stabilisation
- Long-Term Operation & Exit

Our scale is demonstrated across a UK-wide portfolio of over 13,000 homes, with an advisory pipeline that has supported over 15,000 units. Our expertise as an operator is showcased through Una Living's management of one of the UK's largest built portfolios of private rental homes. Our current and past clients include market-leading firms such as Berkeley Group, Curlew, Europa Capital, Gresham House, Grosvenor, Long Harbour, Moda, and PATRIZIA.

By acting as a 'one-stop shop' partner, we offer investors a seamless, institutional-grade solution that de-risks key processes, accelerates lease-up, and drives operational efficiencies.

To Ringley, ESG is not an add-on. It is fully integrated into our whole lifecycle approach, from the very outset, ensuring we create enhanced, sustainable, and long-term value for our partners.

Foreword

Wading through the minefield that is ESG is no easy feat. For the UK living sector, improving the environmental performance of our existing building stock while future-proofing new developments is a challenge of monumental proportions. With nearly 80% of the buildings that will exist in 2050 already standing, the task is clear: we must innovate, retrofit, and lead.

Improving the environmental performance of existing buildings, and future-proofing those which are yet to arrive in our towns and cities is a challenge of monumental proportions. Similarly, how we design, implement and assess the social value they afford – a concept that is yet to move from theoretical to fully defined, with a gaping knowledge gap around what it really means and how it is measured – is another. That is despite over a decade of learning since the Government's Social Value Act of 2010. However, it has become apparent that Governance, while often at the back of the queue, is slowly creeping up the agenda as industry grows increasingly cognisant of the fact that no one facet of our favourite acronym can be viewed in silo.

There is a growing recognition that ESG is as much a value-add tool as it is an obligation. An intimate understanding of what makes a successful and crucially, deliverable strategy, offers everyone in the built environment – from investors through to developers, operators, and consultants – a significant competitive edge. The question is how we get there – a challenge made all the more complex for investors with international exposure, given the varying degrees of sophistication and political willpower that exist by geography, not to mention the absence of unified global framework that can act as an overall steer.

Our 3-year ESG Strategy outlines our commitments across two core pillars:

- ESG HQ Level: Our Operations & Technology
- ESG Asset Level: Our Developments & Communities

We recognise we do not have all the answers, and that meeting the challenges of boosting real estate's ESG credentials will require an industry-wide effort. This is our commitment to playing a leading role in that effort. This commitment is embodied in our ambitious goal to achieve B Corp certification by 2026, joining a global community of businesses that meet the highest standards of social and environmental performance, public transparency, and legal accountability.

Mary-Anne Bowring
Group Managing Director

Sustainability Visions and Values

Our ESG Strategy is built into the core foundations of how we operate and is key to how we deliver asset value.

ESG: Our Vision

In today's market, the goal is to de-risk assets, plan to build sustainable portfolios that adopt technologies and build strategies to mitigate climate change and adopt a 'greening' agenda, in line with and outperforming regulatory requirements where viable to do so.

This not only mitigates the risk of stranding assets, but protects investor yields and can attract 'green' money into the mix.

Our Mission

To lead the market, to hold ourselves accountable for the homes we create and to find creative solutions to decarbonise homes as well as consider whole lifecycle carbon impact.

We will set ourselves targets, monitor our performance and continuously improve.

We will foster a sense of stewardship, engage with the communities we create and involve key stakeholders in all aspects.

Our Governance Statement

Board-Level Accountability & Oversight

We ensure the right Corporate Governance is in place through our Executive and Senior Leadership Teams. The Strategic Board holds overall accountability for ESG performance. Oversight is provided by the Governance and Risk Management Committee, which reviews ESG performance quarterly. A designated ESG Officer ensures the day-to-day implementation of our ESG policies and reporting requirements. This structure underpins our commitment to transparency with our clients and alignment with internationally recognised reporting frameworks.

Integration Across the Lifecycle

ESG is not a siloed function; it is embedded throughout our business activities, including:

- Investment and site selection criteria.
- Development planning and procurement.
- Operations, property management, and stakeholder engagement.

Cultivating Environments Where People Thrive

Our commitment to ESG extends beyond the physical asset to the people who live and work within our communities. We believe that creating lasting value starts with ensuring the fundamental well-being of every individual.

This begins with a rigorous, proactive approach to Health & Safety, ensuring our properties are safe and secure environments for all. But physical safety is only part of the equation. We are equally committed to fostering a culture of inclusivity and mutual respect, where diversity is celebrated and every voice has value. We actively ensure that dignity and respect are paramount in all interactions, building the foundation for genuine communities to flourish. This holistic approach is fundamental to our mission of creating not just sustainable buildings, but lasting, positive social value.

Reporting, Compliance & Green Finance

Investor-Grade Reporting

To ensure accountability and meet the needs of our stakeholders, we are committed to:

- Producing an Annual ESG Report aligned with leading global frameworks such as GRESB, SASB, and TCFD.
- Tracking progress against our ESG KPIs and green finance targets.
- Providing transparent reporting to lenders and investors on ESG-linked loan conditions.

Alignment with Global Standards & Green Investment

Our Environmental Management System (EMS) is aligned with ISO 14001, ensuring a continuous cycle of improvement. This rigorous approach, combined with our strategic priorities, ensures our projects qualify for green and sustainability-linked funding.

To achieve this, our projects must demonstrate:

- EPC A or equivalent energy efficiency.
- Minimum 20% operational carbon reduction vs baseline.
- Minimum 10% biodiversity net gain.
- BREEAM "Very Good" or higher (or equivalent).
- A documented ESG action plan with continuous performance reporting.

This strategy unlocks access to preferential green loan terms, sustainability-linked debt, and ESG-focused capital providers, mitigating financing costs and aligning with investor expectations.

High Level Roadmap (2026-2028)

2026: CERTIFICATION

Achieve BCorp certification

Deliver 20% carbon reduction vs baseline

75% hybrid/EV fleet

Embed diversity & wellbeing targets

Tenant engagement scaled portfolio-wide

2027: CONSOLIDATION

Deepen renewable energy capacity onsite

Expand local supplier spend & biodiversity net gain

Strengthen employee equity/benefits

Publish first full ESG/Impact Report

2028: LEADERSHIP

100% EV/hybrid fleet, 100% renewable energy supply

All HQ & units EPC $\geq$ C

Churn $\leq$ 50%, affordability 40%

Maintain BCorp recertification readiness

Position organisation as ESG leader in sector

Delivery Highlights

Data-Driven Efficiency

A close-up photograph of a person's hands typing on a laptop keyboard. The person is wearing a white shirt and a watch on their left wrist. The background is slightly blurred, showing a desk and some papers.

Leveraging our proprietary platforms to turn millions of data points into actionable insights, optimising energy use and reducing operational costs for our clients

Reduced Emissions

A photograph of a man with glasses and a white shirt looking at a computer screen. The screen displays a video conference with four participants. The man is smiling and appears to be engaged in the conversation.

By encouraging virtual viewings, optimising maintenance routes, and transitioning our fleet to electric vehicles, we are actively reducing our Scope 1 and 3 emissions

Sustainable Communities

A photograph of a group of young women sitting around a table, engaged in a discussion. They are looking at something on the table, and one woman is holding a small object. The setting appears to be a casual meeting or workshop.

Fostering vibrant, inclusive communities through targeted social value initiatives, resident engagement events, and partnerships with local enterprises

Our B Corp Journey

A photograph of a modern office interior. The space features large windows, a reception desk, and several indoor plants. The lighting is bright and natural, creating a welcoming atmosphere.

We have formally begun our journey to B Corp certification by completing our initial B Impact Assessment, creating a clear roadmap for improvement across every aspect of our business.

Our Approach to Delivering on Our Targets

Our operations are centred around our residents and homes, the core of our business. We believe that by focusing on sustainable practices and high-quality living environments, we can make a lasting impact. Through our portfolio, we positively impact residents' lives by creating communities that are resilient, efficient, and supportive.

We actively promote sustainable living, empowering our employees with the tools and knowledge to help residents embrace this mission. At the same time, we remain dedicated to minimizing our carbon footprint by streamlining operations and leveraging our advanced proprietary technology to bridge the performance gap between design and operation.

Resilient Assets & Communities

We focus on the long-term resilience of our physical assets and the social fabric of our communities. This means future-proofing buildings against climate risk, developing data-led retrofit pathways to improve energy efficiency, and reducing operational carbon. Socially, we foster inclusive environments, create opportunities for connection, and partner with local organisations to ensure our developments contribute positively to the wider neighbourhood, creating tangible social value.

Efficient Operations & Technology

Technology is at the heart of our strategy. We use our proprietary platforms to capture granular data, allowing us to optimise building systems, reduce waste, and minimise energy consumption. This data-led approach extends to our procurement, where we champion a sustainable supply chain by prioritising local suppliers, circular economy principles, and products with high energy-efficiency ratings to reduce the embodied and operational carbon of our assets.

Accountable Governance & Influence

Strong governance provides the foundation for our entire ESG strategy. We are committed to investor-grade transparency through reporting aligned with TCFD and GRESB, and our pursuit of B Corp certification holds us accountable to the highest standards. We believe in using our unique position as both advisor and operator to influence the wider industry, educating clients, investors, and stakeholders to drive collective action and champion higher standards.

United Nations - Sustainable Development Goals (SDGs)
All players in the Built Environment ought to be able to focus on at least 9 of the 17 sustainable development goals from the United Nations 2030 agenda as set out below. Our strategy is aligned with goals 3, 4, 5, 7, 8, 11, 12, 13, and 15, which guide our actions and help us measure our impact.

Our Strategic Pillars & Commitments

Using our unique operational capabilities and proprietary technology as a core driver of ESG performance.

Optimise Efficiency Through Technology

Deploy our proprietary platforms and sensor tech to capture granular data, optimise building performance.

Reduce operational emissions across the portfolio, bridging the gap between designed and as-built performance

Decarbonise Our Corporate Operations

Actively measure and reduce our carbon footprint:

Scope 1: direct emissions from sources owned or controlled by a company

Scope 2: indirect emissions from the generation of purchased energy

Scope 3: all other indirect emissions that occur in a company's value chain

Champion a Sustainable Supply Chain

Embed ESG criteria into procurement processes, use our ESG decision matrix to score key purchasing decisions, and favour local/sustainable suppliers.

Purchase white goods with good energy and water efficiency ratings.

Embrace the Circular Economy

Minimise operational waste by promoting reuse and recycling across our corporate offices.

Prefer suppliers who hold ISO14001 accreditation.

Responsibly manage waste

ESG Asset Level: Our Developments & Communities

Enhancing the physical asset and the social fabric within and around it.

Enhance Asset Resilience & Energy Efficiency

Focus on improving fabric efficiency and deploying low-carbon technologies to minimise energy demand and future-proof investments.

Develop targeted retrofit pathways for our assets,

Foster Thriving & Inclusive Communities

Foster stewardship and create inclusive communities. Deliver tech connectivity, service-on-demand and use tech to influence socially and environmentally responsible behaviours and well-being programmes. To connect our communities with the wider local neighbourhood

Empower Sustainable Resident Behaviour

Use our resident apps and smart building technology to provide our residents with clear data on the carbon they produce from their home and use this to promote behaviour change and to champion an environmentally conscious lifestyle.

Promote Biodiversity and Green Spaces

Increase and protect green infrastructure across our portfolio, implementing wildflower areas, protecting species, and enhancing the local ecosystem where possible

Target & Measures 2026-2028

Targets and Measures 2026-2028

Carbon & Energy

ESG HQ Level:
Our Operations & Technology

	Parameter	Objective	Baseline	Target 2026	Target 2027	Target 2028	Status
1	Carbon footprint reduction	Outperform national average (3.2tCO ₂ e)	0.24 tCO ₂ /person	Maintain	Maintain	Maintain	● On target
2	Carbon offset programme	Offset to Net Zero	1,050 trees	50% trees planted	75% trees planted	100% trees planted	● Off target
3	Reduce Scope 1 emissions* * direct emissions from sources owned or controlled by a company	-10% CO ₂	9,515.96 kgCO ₂	3% decrease	7% decrease	10% decrease	● On target
4	Office EPC Ratings	100% EPC Grade ≥ C for all offices under our control	2 offices (out of 4) under our control. 3 (75%) offices are grade C or above	100%	100%	100%	● On target
	Use of renewable electricity	100% renewable in offices under our control	3 offices on renewable contracts (100%)	100%	100%	100%	● On target
	Produce some of our own (solar)	100% owned roofs to contain solar	100%	100%	100%	100%	● On target
5	Energy: No gas, only electric appliances	100% Electric in offices under our control	4 offices, 3 able to procure energy (75%)	100%	100%	100%	● On target
	Sensor-controlled lighting	100% coverage in offices under our control	2 offices partially covered (50%)	50%	90%	100%	● Off target
	LED lighting installation in offices	100% LED's in offices under our control	2 offices partially efficient (100%)	100%	100%	100%	● On target
